*1: As per the specification of iPods and iPhones, video and slide show signals can not be output.

*2: The specification concerning the charge (power supply specification) changed from iPhone 3G. Therefore, it is not possible to charge it.

However, I made ASD-3N/W and ASD-11R a specification that was able promptly to be charged. "Charging is not supported with this accessory" are displayed on iPod display.

*3: ASD-3N/W can play MusicVideo and Podcast, but ASD-3N/W may reset if Movie playback from iPhone 3G. Please play iPod in remote mode.

We solved this symptom to improve the firmware via DPMS by OST-F1451.

*4: As per the specification of iPods and iPhones, video signal can be output after updating the firmware of iPod or iPhone (after Ver 2.0.0).

*5: As per the specification of iPods and iPhones, video signal can be output at only A-version of AVP-A1HD, AVC-A1HD, AVR-5308CI, AVR-4308CI/4308, AVR-3808CI/3808, and all AVR-**10 series.

*6: As per the specification of iPods and iPhones, video signals can not be output, but audio signal can be output with video signal.

*7: The beginning image of the slide show cannot be selected by remote control by the specification of iPod. The slide show is from the first image when not selecting it with the wheel of iPod.

Attention: The iPod touch, touch 2, iPhone, iPhone 3G and iPhone 3GS might not be controlled by Remote control with A/V products.
